## Carbon Emissions Statement

### Statement

Perth Airport has undertaken a commitment to reduce its carbon emissions by participating in the Airports Council International's Airport Carbon Accreditation (ACA) program. This endeavour is a long-term strategy that is consonant with the airport's commitment to sustainability. The airport's objective is to continually reduce its carbon emissions and improve its carbon management, thereby demonstrating its dedication to mitigating the impact of dangerous climate change on our community now and in the near future.

### Airport Carbon Accreditation

The ACA program is an internationally recognised standard for airports to measure and manage their carbon emissions. The program comprises five levels, which provide a framework for airports to reduce their carbon footprint and enhance their operational efficiency in line with a best practice. The goal is to continually review and implement new methods to reduce emissions, both within the airport's own operations and through collaboration with other stakeholders.

### Our Commitments

At Perth Airport, sustainability is an integral component of our business operations. We are actively endeavouring to reduce our carbon footprint by implementing energy-saving initiatives, undertaking sustainable property development and investing in renewable energy solutions. Our ultimate objective is to decrease our GHG emissions and promote sustainable practices throughout the airport, thereby upholding our commitment to environmental stewardship and social responsibility. We are committed to:

- The reduction of PAPL-only Scope 1 and Scope 2 emissions by at least 70% by 2030 – from a FY2018 baseline with the remainder to be offset, ensuring carbon neutrality by 2030;
- The use of 50% renewable energy across the airport estate by 2030;
- Achieve ACA Level 4 accreditation by 2026;
- Work with tenants and partners to assist them in achieving sustainable working environments and support their sustainability innovations; and
- Compiling and presenting a comprehensive GHG emissions inventory and providing a data-driven foundation for decision-making.

Signed,

Jason Waters  
Chief Executive Officer
